TECHNICAL SKILLS

HTML5 ▪ CSS3 ▪ Typescript
Svelte ▪ React ▪ SQL ▪ Drupal
C++ ▪ Java ▪ Python ▪ Lua
Agile ▪ Scrum Methodology
C# ▪ MVC ▪ .NET Framework
Visual Studio ▪ Azure
Godot / Unity Game Engines
Linux ▪ Mac ▪ Windows

PERSONABLE SKILLS

Meticulous ▪ Detail Oriented
Strong Communication Skills
Honest ▪ Accurate ▪ Reliable
Quick to Learn

EDUCATION

The Tech Academy
April - June, 2019

15-week bootcamp designed
to train students into entry-
level, full-stack software
developers.

Portland Community College
2013 - 2015

Math and Computer Science
major. Completed Calculus II
and all First Year CS classes.

WORK HISTORY

Clarity Innovations Software Developer Dec, 2022 – Apr, 2025

Worked with a team to build and maintain occupational tools for educators, a combination of html canvas apps and Drupal website design. Acted as Deployment Lead and managed release milestones for international clients. Developed internal debugging tools to help the team analyze issues. Worked with Product Managers to develop MVP solutions to issues and feature requests. Produced educational material to spread technical knowledge among team members. Delivered high-quality code with a strong emphasis on documentation and maintainability.

Novus Labs Test Technician Sep, 2021 – Dec, 2022

Performed regression testing using Jira, TestRail, and Linux tools. Wrote thorough bug reports covering environment details and exact reproduction steps. Cooperated with developers to determine regression plans for time-sensitive issues.

Prosper IT Consulting Software Developer Intern June, 2019

Worked for two weeks with an Agile team tasked with building an internal website for a client. Contributed heavily to their site-wide chat feature, smoothing its animations and aesthetics. Optimized the backend chat propagation between clients. Implemented a website tour feature to on-board new users.

PROJECTS

"Erys Engine" with Godot / GLSL Nov 2025 – Current

A game prototype blending turn-based and real-time puzzle gameplay. Features a turn management system built with async programming to leave room for arbitrarily long animations and independently triggered real-time events; a pop-up inventory menu of collected spells, each with unique action scripts; custom shaders to force a gameboy-like aesthetic; a character-state controller that is simple and extensible.

Advance Wars in Typescript / Pixijs / GLSL Aug 2019 – Dec 2022

An in-browser clone of *Days of Ruin* (2008). Features an auto-configuring tileset and live map editing; a state-machine generic which drives the turn system among other things; simple websocket driven online multiplayer using a backend in NodeJs (hosted on Glitch); and mostly complete gameplay mechanics.

"Descent": 3D Camera Demo with Godot Nov – Sep 2025

A project started to build skill with 3D applications. Features scripted, room-by-room camera angles and behaviors to maintain a theater-like aesthetic; a layered behavioral system that allows the camera to diverge dynamically from its baseline; a simple controller to manage player states like running, jumping, wall-jumping, etc.
